Facsimile Transceiver TT-41/TXC-1B is an electromechanical-optical facsimile set of the revolving drum type, for transmission and reception of maps, photographs, sketches, or text between fixed stations, over point-to-point radio (a-m; voice, or cw) or wire communication channels.

This equipment is transportable, but has no carrying case, although a canvas dust cover is provided.

 Provision has been made for a talk-back circuit, using an external speaker, and the output jack on the left side of the panel assembly.

Special features are the paper holding brush (so that only the leading edge must be clamped), and half speed operation to reduce echo effects encountered under conditions of multipath radio reception.
